

## **CV RICCARDI JURI**

Juri Riccardi, Senior researcher, physicist, joined in Enel Research Department in 1986. Main research topics deal with renewable energy power plants, distributed generation, hydrogen production/storage/reuse and energy storage systems. He was also involved in development of optimization algorithms for energy management applications and is an expert in mathematical model simulation of complex dynamical systems. He was project coordinator of Research Projects funded by EU and Italian Government. In 2016, he joined in Enel Green Power Innovation Department. He is currently involved in activities concerning the development of innovative solutions for mini and large hydro plants. He is also main author or co-author of about forty international publications.
